Parathënie

Libri “Regjistër i Specieve të Faunës së Shqipërisë 2010” përmban 3251 specie të njohura të faunës detare, të ujërave të ëmbël, të tokës dhe parazitare të Shqipërisë. Janë përjashtuar insektet dhe disa tipa të vegjël, kryesisht detarë. Në regjistër renditen speciet e faunës së liqeneve ndërkufitare dhe të lumenjve Drini dhe Vjosa, përfshirë edhe të pjesëve të tyre në vendet fqinje.

Të gjitha taksat janë grupuar sistematikisht dhe renditur alfabetikisht, ndërsa taksat e nivelit të lartë janë renditur sistematikisht.

Mendojmë se ka ende specie të panjohura nga fauna e Shqipërisë, kryesisht invertebrorë të detit, peshq të thellësive të detit, artropodë dhe nematodë të vegjël të tokës dhe të ujërave të ëmbël, krimba parazitare e tj.

Shpresojmë se regjistri do të nxisë studiuesit, veçanërisht të rinjtë, për të thelluar studimet në njohjen e faunës së Shqipërisë.

Autori

Preface

The book “Register of Species of the Fauna of Albania 2010” contents of 3251 known species of the marine, freshwaters, terrestrial and parasitic fauna of Albania. Insects and some small phylum, particularly marine, are excluded. The species of the fauna of the crossborder lakes, as well as that of the Drini and Vjosa rivers, included also of their parts in the neighbouring countries, are listed in the register.

All taxa are grouped systematically and listed alphabetically, while the taxa of the high level are listed systematically.

We think that there are other unknown species of the Albanian fauna, especially marine invertebrates, fishes of the sea depths, small terrestrial and freshwater arthropods and nematodes, parasitic worms etc.

We hope that this register will encourage the researchers, particularly the young ones, to thoroughly explore the fauna of Albania.
